

Amazon India Dashboard

Business Requirements

A simple summary of what the dashboard should show and what business questions it should answer.

1. Project Objective

The main goal is to create a simple, easy-to-understand management dashboard for a non-technical manager. It should bring Sales, Profit, Products, Orders, Customer Order Status, Payment, Fulfilment, and Geographic Performance together in one place.

The dashboard should use clear KPIs, charts, and graphs so business performance can be understood quickly and used for better decision-making.

2. Overall Sales & Profit Performance

Business Question: How is the business performing overall?

Dashboard should show
• Total Sales
• Total Profit
• Total Orders
• Total Units Sold
• Average Order Value
• Profit Margin %
• Monthly Sales & Profit Trend

Expected Insight: Understand whether sales and profitability are improving or declining over time.

3. Category & Product Performance

Business Question: Which products and categories are driving the business?

Dashboard should show
• Category-wise Sales
• Category-wise Profit
• Category-wise Units Sold
• Top 10 Products by Sales

Expected Insight: Identify high-performing categories/products and products that may need attention.

4. Order Status & Revenue Loss

Business Question: How many orders are successfully completed and how many are being lost?

Dashboard should show
• Delivered Orders
• Shipped Orders
• Returned Orders
• Cancelled Orders

• Return Rate %
• Cancellation Rate %
• Category-wise Returns & Cancellations

Expected Insight: Understand the impact of returns and cancellations on overall business performance.

5. Payment, Fulfillment & Geographic Performance

Business Question: Which payment methods, fulfillment methods and states are generating business?

Dashboard should show
• Sales by Payment Method
• Profit by Payment Method
• Sales by Fulfillment Method
• Profit by Fulfillment Method
• State-wise Sales
• State-wise Profit
• State-wise Orders

Expected Insight: Identify important markets and understand how payment and fulfillment channels contribute to business performance.

Success Criteria

The finished dashboard should be simple enough for a non-technical manager to quickly understand overall performance, identify strong and weak areas, and support business decisions.
